## **Assessment Questionnaire**

This assessment sheet is meant to be of assistance in determining long-term care solutions. It is meant to "take stock" of what a person's needs might be, and what the projected care needs are based on lifestyle, genetics, current health (mental and physical), and support systems. This questionnaire is similar to an assessment done by a geriatric care professional, and is intended as information gathering only for the non-professional and a means of starting a process for determining care needs and the best course of action based on projections by a professional.
